These results suggest that beta-arrestin a recruited in response to receptor phosphorylation by different GRKs distinct functional potentials. [2005]

Low surface deposition and endocytosis are dependent on constitutive C-terminal phosphorylation, suggesting requirement for beta-arrestin 2 binding in receptor internalization. [2004]

In contrast, corresponding to its inability to cause mu OR internalization, morphine is unable to either elicit mu OR phosphorylation or stimulate beta-arrestin to translocation. [1998]

While both etorphine and morphine effectively activate the delta OR, only etorphine triggers robust delta OR phosphorylation followed by plasma membrane translocation of beta-arrestin 2 and receptor internalization.

Heterologous activation of protein kinase C stimulates phosphorylation of delta-opioid receptor at serine 344, re beta-arrestin 2- and clathrin-mediated receptor internalization. [2001]

Receptor mutants that lack any two phosphorylation sites retained their ability to recruit endogenous beta-arrest cell membrane and were normally sequestered, whereas alanine mutation of any three C-terminal serine residu abolished both beta-arrestin 🌣 binding and rapid agonist-induced internalization. [2002]

Determinants in the receptor's core (Asn-289 and Lys-382) appear to regulate internalization of the receptor/beta arrestin complex toward early endocytic endosomes during the initial step of endocytosis. [2002]

After angiotensin II stimulation, both wild-type and beta-arrestin 🗘 mutants translocated to the cell membrane. recruitment was weaker for mutants of the hydrophobic face of helix I. [2005]

It also blocked beta arrestin & translocation and receptor downregulation induced by formyl-Nle-Leu-Phe. [20

These differences in mechanism of action are reflected in the kinetics of airway smooth muscle relaxation and bronchodilation in patients with asthma. beta-Adrenoceptor desensitization associated with beta2-agonist activation consequence of phosphorylation by beta-ARK and uncoupling of the receptor from Gs following beta-arrestin \$\mathcal{C}\$ of internalization and recycling of the receptor through processes of sequestration and resensitization and downr modulated by an effect on receptor gene expression. [1998]

To address this question, we investigated the ability of different muscarinic receptor dimers to recruit beta-arresti using both co-immunoprecipitation and fluorescence microscopy in COS-7 cells. [2005]

By confocal microscopy, we observed beta-arrestin 1 and 2, translocated to the plasma membrane and col with D2L and D2S receptors upon stimulation with dopamine, and this was followed by the translocation of rece endocytic vesicles. [2004]

Bioluminescence resonance energy transfer analysis revealed that both wild-type and beta-arrestin 🗘 mutant: a capacity to interact with the AT(1)R, although the interaction with the mutants was less stable. [2005]

For class B receptors (e.g. V2 vasopressin receptors), which recycle slowly, beta-arrestin 🗘 internalizes with th

into endosomes. [2003]

Nicotine induces <u>cell proliferation</u> by beta-arrestin 分-mediated activation of Src and Rb-Raf-1 pathways. [2006 Although still capable of activating phospholipase C, this receptor loses almost completely the ability to recruit be arrestin-1 分 following <u>carbachol</u> stimulation in <u>COS-7 cells</u>. [2005]

Desensitization to low concentrations of <u>isoproterenol</u> (previously shown to be essentially protein kinase A-medi not receptor-specific, i.e. heterologous) was not affected by overexpression of either beta ARK or **beta-arrestin** น้

Several GPCRs internalize as a stable complex with **beta-arrestin** and the stability of this complex appears to at least in part, whether the receptors are dephosphorylated in early **endosomes** and recycled back to the cell su fully functional receptors, retained in early **endosomes** or targeted for degradation in **lysosomes**. [2003]

Role of beta-arrestin 1 in the metastatic progression of colorectal cancer. [2006]

Furthermore, our data implicate a functional role for **beta-arrestin 1** \$\overline{a}\$ as a mediator of cellular migration and metastasis. [2006]

To our knowledge this is the first study demonstrating a defined molecular role of <u>beta-arrestin [?]</u> with direct r to <u>cell growth</u> and cancer. [2005]

Using in vitro binding assays, we have identified two glutamate residues (Glu-849 and Glu-902) in beta(2)-adap important in beta-arrestin ab binding. [2002]

Using receptor <u>mutagenesis</u>, we demonstrate that the ability of **beta-arrestin** $\hat{\boldsymbol{\omega}}$ to remain associated with these is mediated by specific clusters of <u>serine</u> and <u>threonine</u> residues located in the receptor carboxyl-terminal tail. [2

High levels of beta-arrestin-1 amRNA and immunoreactivity were found in peripheral blood leukocytes. [1993]

Using two cell types, human <u>endothelial cells</u> and <u>smooth muscle</u> cells, we found that 6-8-h treatments with the inducing agents cholera toxin, forskolin, iloprost, and <u>isoproterenol</u> raised <u>beta-arrestin-1</u> mRNA by 2-4-fold.

The mean **beta-arrestin 1** cepression was unchanged in the **cytosol** of TTNs, in **membranes** and **cytosol** of decreased in the **membranes** of TTNs compared to their surrounding tissue. [2000]

These data suggest that **beta-arrestin** binding, which terminates receptor-G protein coupling, also initiates a so wave of <u>signal transduction</u> in which the "desensitized" receptor functions as a critical structural component of a signaling complex. [1999]

Regulation of tyrosine kinase activation and granule release through beta-arrestin 2 by CXCRI. [2000]

ICI118551 and propranolol also promoted beta-arrestin a recruitment to the receptor. [2003]

Constitutive protease-activated receptor-2-mediated migration of MDA MB-231 <u>breast cancer</u> cells requires both arrestin-1 and -2. [2004]

In contrast, beta-arrestin & mutants displayed enhanced activity at desensitizing the serotonin 5-hydroxytryptar receptor. [2004]

The fusion protein of **beta-arrestin 1** with **glutathione** S-transferase inhibits the beta(1)- and beta(2)AR-stimul adenylyl cyclase activities, although inhibition of the beta(1)AR-stimulated activity requires a higher concentration fusion protein than that of the beta(2)AR-stimulated activity. [2000]

Regulation of muscarinic acetylcholine receptor sequestration and function by beta-arrestin 2. [1999]

In conclusion, agonist-activated hPTH1-Rc internalization involves beta-arrestin amobilization and targeting to coated vesicles. [1999]

Two alternatively spliced isoforms of human **beta-arrestin-1** $\stackrel{\frown}{\omega}$, differing only in the presence or absence of 24 be pairs/8 amino acids within the sequence, were identified and called beta-arrestin-1A and beta-arrestin-1B, respectively. [1993]

Molecular analysis of human beta-arrestin-1 : cloning, tissue distribution, and regulation of expression. Ident two isoforms generated by alternative splicing. [1993]

The reduction in beta-arrestin-1 🖨 levels was significantly correlated with the severity of depressive symptoms

The findings in human subjects support the implication of **beta-arrestin-1** in the pathophysiology of <u>mood disorders</u>. [2004]

Mononuclear leukocytes of patients with depression showed significantly reduced immunoreactive quantities of arrestin-1 ♀ [2004]

RESULTS: Beta-arrestin-1 1 levels were significantly elevated by all three antidepressants in rat cortex and

hippocampus, while in the striatum no alterations could be detected. [2004]

METHOD: Beta-arrestin-1 ameasurements were carried out in cortical, hippocampal, and striatal brain regions chronically intragastrically treated with either imipramine, desipramine, or fluvoxamine. [2004]

This beta-arrestin 分-mediated regulation of transcription appears to play important roles in cell growth, apopto: modulation of immune functions. [2007]

Among all cell lines, sequestration correlated best with the product of betaARK and beta-arrestin 2 expression.

Both beta ARK and beta-arrestin are members of multigene families. [1994]

The agonist-stimulated differential sorting of the mGlu(1) receptor and <u>beta-arrestin [?]</u> as well as the activatic kinases by mGlu(1) agonist was confirmed in cultured cerebellar <u>Purkinje cells</u>. [2003]

Utilizing a low stringency hybridization technique to screen a rat brain <u>cDNA library</u>, we have now isolated cDNA representing two distinct <u>beta-arrestin [?]</u> &-like genes. [1992]

Addition of recombinant purified beta-arrestin-1 mimicked human chorionic gonadotrophin to promote desensitize human chorionic gonadotrophin-stimulated AC activity, in the presence of the ATP <u>phosphorylation</u> antagonist <u>a imidodiphosphate</u>, with an ED50 of approximately 0.1 nM. [1999]

The localization of the alpha(1B)-ARs and AT(1A)Rs with <u>arginine</u> substitutions can be restored to the <u>plasma m</u> by either using selective antagonists or preventing the <u>endocytosis</u> of the <u>beta-arrestin [?]</u>-receptor complexes.

Internalization of the ligand did not occur in <u>beta-arrestin [?]</u>-deficient cells; was blocked or reversed by another ligand, <u>phentolamine</u>, indicating it to reflect binding to the orthosteric recognition site; and was prevented by bloc clathrin-mediated endocytosis. [2005]

Increased levels of an 87-kDa protein reactive with <u>glycoprotein</u> hormone R-reactive antibody, consistent with th R, coimmunoprecipitated with follicular membrane <u>beta-arrestin-1</u> in response to LH/CG R activation compared vunactivated R. [1999]

While AT(1A) receptor internalization could be inhibited by a dominant-negative **beta-arrestin 1** mutant (beta arr1 418)), treatment with hyperosmotic <u>sucrose</u> to inhibit internalization did not abrogate the differences in arrestin as observed between the wild-type and mutant receptors, indicating that arrestin binding precedes, and is not depen receptor internalization. [2001]

Of particular note are the recent findings regarding recruitment of cyclic nucleotide phosphodiesterase to **beta-arı** transfected HEK293 cells and in native **cardiac myocytes**. [2003]

Alteration of sites of <u>acylation</u> reduced internalization and prevented interactions with <u>beta-arrestin [?]</u> 1-GFP. [/s In contrast, no change in the subcellular distribution of adenylate cyclase or beta-arrestin 1 and 2 was observed

The identification of the ubiquitin-proteasome pathway and **beta-arrestin** as molecular targets of neurotoxicity is to provide novel therapeutic strategies both for the treatment of **drug addiction** and the treatment of **neurodeger disorders**. [2006]

Our choice of screening platform was the Transfluor beta-arrestin-green fluorescent <u>protein translocation</u> assa full-length human orphan GPCRs were stably expressed in a U-2 OS cell background. [2006]

Moreover, stimulation of the angiotensin II type 1A receptor activated JNK3 and triggered the colocalization of arrestin 2 and active JNK3 to intracellular vesicles. [2000]

PTH-related protein analogs modified at position 1 induced selective stabilization of the active G protein-couple the receptor, resulting in lack of beta-arrestin-2 is recruitment to the cell membrane, sustained cAMP signaling, absence of ligand-receptor complex internalization. [2002]

Angiotensin II type 1 receptors (AT1-Rs) are coupled to the contraction-mediating RhoA \$\frac{1}{2}\$/Rho-kinase pathway be desensitized by phosphorylation through G-protein-coupled receptor [?] kinases (GRKs) and binding of b arrestin-2 [?] 2. [2007]

These data suggest that beta-arrestin 2 are can mediate chemotaxis through mechanisms which may be G-prot independent (Ang II receptors) or -dependent (LPA receptors). [2005]

Dishevelled 2 [?] recruits beta-arrestin 2 to mediate Wnt5A-stimulated endocytosis of Frizzled 4 . [20]

Endocytosis of Frizzled 4 & (Fz4 &) in human embryonic kidney 293 cells was dependent on added Wnt5A pro was accomplished by the multifunctional adaptor protein beta-arrestin 2 2 (betaarr2), which was recruited to Fz4 binding to phosphorylated Dvi2 [?] . [2003]

Beta-arrestin 2 mediates endocytosis of type III TGF-beta [?] receptor and down-regulation of its signali

We identified c-Jun amino-terminal kinase 3 (JNK3 12) as a binding partner of beta-arrestin 2 12 using a yeast to screen and by coimmunoprecipitation from mouse brain extracts or cotransfected COS-7 cells. [2000]

The role of beta-arrestin 🖈 was further confirmed by showing that transfection of beta-arrestin 2 🌣 in these kni cells restored ICI118551 promoted ERK1 2/2 activation. [2003]

Further experiments revealed that overexpression of beta-arrestin 2 are enhanced the p53 [?] -mediated apor while suppression of endogenous beta-arrestin 2 arression by RNA interference technology considerably a the p53 [?] -mediated apoptosis. [2003]

The increased beta-arrestin 2 \(\frac{1}{2}\) expression in TTNs and the desensitization of the TSH receptor by beta-arrest vitro suggest that the beta-arrestin 2 😭 expression is cAMP dependent and that beta-arrestin 2 😭 very likely de the constitutively activated TSH receptor in toxic thyroid nodules. [2000]

Independent beta-arrestin 2 and G protein-mediated pathways for angiotensin II activation of extracellular si regulated kinases 1 and 2. [2003]

Activation of GPCRs led to formation of a ternary complex of Mdm2 [?] &, beta-arrestin 2 &, and GPCRs and th recruited Mdm2 [?] to GPCRs at plasma membrane. [2003]

Beta-arrestin 2 & dependent angiotensin II type 1A receptor-mediated pathway of chemotaxis. [2005]

In parallel, stimulation of the wild-type <u>angiotensin</u> type 1A receptor with <u>Ang II</u> robustly stimulates <u>ERK1 [?]</u> \(\frac{1}{2}\)/2 with approximately 60% of the response blocked by the PKC inhibitor (<u>G protein</u> dependent) and the rest of the r blocked by depletion of cellular <u>beta-arrestin</u> 2 \(\frac{1}{2}\) by small interfering RNA (<u>beta-arrestin</u> \(\frac{1}{2}\) dependent). [2003]

We show in real time and in live human embryonic kidney (HEK-293) cells that a **beta-arrestin-2** ♣-green fluores protein conjugate internalizes into <u>endocytic vesicles</u> with agonist-activated neurotensin-1 receptor, <u>oxytocin reangiotensin</u> Il type 1A receptor, and <u>substance P receptor</u> ❖. [2001]

This desensitization process coincides with a redistribution of <u>GRK2</u> from the <u>cytosol</u> to the <u>plasma membrar</u> followed by a robust redistribution of <u>beta-arrestin 2</u> and a profound change in cell morphology that occurs afte <u>SPR</u> stimulation. [1999]

We find that two molecules interact with mammalian Smo in an activation-dependent manner: <u>G protein-couplec kinase 2</u> (GRK2) leads to <u>phosphorylation</u> of Smo, and <u>beta-arrestin 2</u> fused to green fluorescent prote interacts with Smo. [2004]

The <u>glucagon-like peptide-2 receptor</u> $^{\circ}$ C terminus modulates <u>beta-arrestin-2</u> association but is dispensable ligand-induced desensitization, <u>endocytosis</u>, and <u>G-protein-dependent</u> effector activation. [2005]

This study has focused on enhancing the signal generated from the interaction between a G-protein-coupled rei (GPCR [?]) and beta-arrestin 2 (beta-arr2), measured by the bioluminescence resonance energy transfer (technology. [2004]

MOR363D underwent slower internalization as reflected in the attenuation of membrane <u>translocation</u> of beta-au when compared with wild type <u>MOR</u>, but the level of receptor being internalized was similar to that of wild type <u>MU</u> h of etorphine treatment. [2003]

Regulation of GRK 2 2 and 6, beta-arrestin-2 2 and associated proteins in the prefrontal cortex of drug-free an antidepressant drug-treated subjects with major depression. [2003]

In contrast, expression of <u>beta-arrestin 1</u> and <u>beta-arrestin 2</u> by osteoblastic cells varied between <u>cell line</u> Chromosome mapping of the human arrestin (SAG), <u>beta-arrestin 2</u> (ARRB2), and <u>beta-adrenergic recellings</u> (ADRBK2) genes. [1994]

Conversely, suppression of <u>beta-arrestin 1</u> &, but not <u>beta-arrestin 2</u> &, expression by using <u>RNA interference</u> fold increase in tumor necrosis factor-stimulated NF-kappaB activity as measured by NF-kappaB mobility-shift analysis. [2004]

Surprisingly, although the truncated mutant receptors failed to interact with **beta-arrestin-2** $\stackrel{\hookrightarrow}{\omega}$, they underwent ho desensitization and subsequent resensitization with <u>kinetics</u> similar to that observed with the wild-type <u>GLP-2R</u> $\stackrel{\hookrightarrow}{\omega}$

Co-expression of PAR1 [?] $\stackrel{.}{\omega}$ with beta-arrestin 1 $\stackrel{.}{\omega}$ (betaarr1) in COS-7 cells resulted in a marked inhibition of [?] $\stackrel{.}{\omega}$ signaling, whereas beta-arrestin 2 $\stackrel{.}{\omega}$ (betaarr2) was essentially inactive. [2004]

Of all the retinoid receptors, the RAR beta2 subtype showed the strongest sensitivity to beta-arrestin 2 2 action

Moreover, an agonist-mediated <u>translocation</u> of wild-type beta2AR and endogenous <u>beta-arrestin 2</u> ★ to <u>endoc</u> <u>vesicles</u> prepared from CHO <u>fibroblasts</u> was observed. [1997]

In summary, contrary to data obtained for the <u>beta2AR</u> $\stackrel{\hookrightarrow}{\omega}$, the constitutive activation of the <u>TSHR</u> $\stackrel{\hookrightarrow}{\omega}$ does not infludesensitization and time course for internalization of the receptor, and in agreement with findings for the FSH and receptors, these results characterize the <u>TSH receptor</u> as a member of the class A of <u>G protein</u>-coupled recepto have a higher affinity to <u>beta-arrestin 2</u> $\stackrel{\hookrightarrow}{\omega}$ than <u>beta-arrestin 1</u> $\stackrel{\hookrightarrow}{\omega}$ and do not colocalize with beta-arrestins in endosomes. [2006]

In the present study, we demonstrated that repeated s.c. treatment with etorphine, but not morphine, produced a increase in protein levels of <u>G protein-coupled receptor kinase 2</u> , <u>dynamin [?] II, beta-arrestin 2</u> and phosphorylated-conventional protein kinase C in <u>membranes</u> of the mouse <u>spinal cord</u>, suggesting that the etor induced mu-opioid receptor desensitization may result from <u>G protein-coupled receptor kinase 2</u> /dynaminII/k arrestin2-dependent <u>phosphorylation</u> of mu-opioid receptors. [2006]

Gene-wide tests, adjusted for the number of <u>SNPs</u> analysed in each gene, identified associations with <u>TPH2</u> \$\frac{1}{2}\$, \$\frac{1}{2}\$, ADRB2 \$\frac{1}{2}\$, MAOA \$\frac{1}{2}\$ and \$\frac{1}{2}\$ and \$\frac{1}{2}\$. [2006]

Overexpression of either <u>beta-arrestin 1</u> or <u>beta-arrestin 2</u> led to marked inhibition of NF-kappaB activity, a measured by <u>reporter gene</u> activity. [2004]

In the present study, we have investigated the expression of the individual isoforms of <u>beta-arrestin</u> and of beta <u>left ventricles</u> from failing and control human hearts. mRNAs for all four proteins, <u>beta-arrestin-1</u>, beta-arrest beta ARK-1, and beta ARK-2, were identified in human heart. [1994]

Our data suggest that in cirrhosis-induced <u>vasodilation</u>, the <u>AT1-R</u> is desensitized by <u>GRK-2 [?]</u> and <u>beta-i</u> and that changed patterns of phosphorylated <u>Ca(2+)</u> sensitizing proteins decrease <u>Ca(2+)</u> sensitivity. [2007]

Cell surface distribution and agonist-promoted internalization of receptors and recruitment of beta-arrestin 2 & w unaffected by the loss of 187 glycosylation. [2004]

However, upon coexpression of arrestin-2 (beta-arrestin-1 a) or arrestin-3 (beta-arrestin-2 a), internalization of alpha2b AR was dramatically enhanced and redistribution of receptors to clathrin coated vesicles and endoson observed. [1999]

However, in the same <u>cell lines</u> under the same conditions, overexpression of <u>beta-adrenergic receptor kinase</u> beta-arrestin 2 \(\hat{\phi}\) accelerated the rate of DPDPE- but not DAMGO-induced receptor desensitization. [1999]

Here, we report that **beta-arrestin 2** stimulates the <u>transcriptional activation</u> of the <u>retinoid</u> RAR and RXR receptors. [2006]

Using Xenopus laevis oocytes coexpressing mammalian mu-opioid receptors (MORs), beta-adrenergic receptor 2 (beta-ARK2) [also called G protein-coupled receptor kinase (GRK3), and beta-arrestin 2 (beta-ar compared the rates of beta-ARK2 (GRK3)- and beta-arr 2-mediated homologous receptor desensitization prod treatment with opioid agonists of different efficacies. [1998]

In the presence of C2 [?] alone, CRIT associates with the adapter protein, beta-arrestin-2 $\stackrel{\frown}{\omega}$, and whether in ass with C2 [?] or not, then appears in the perinuclear region, but does not appear to be translocated into the nucleus

Characterization of <u>isoprenaline</u>- and <u>salmeterol</u>-stimulated interactions between beta2-adrenoceptors and <u>beta2</u> using beta-galactosidase complementation in C2C12 cells. [2005]

<u>Isoprenaline</u>, <u>noradrenaline</u>, and adrenaline (-log EC(50) = 5.9, 5.5, and 5.7, respectively) stimulated an associate between the beta(2)-adrenoceptor and **beta-arrestin 2** $\stackrel{\triangle}{\omega}$ at much higher concentrations than required for activation cAMP accumulation (-log EC(50) = 7.6, <u>6.3</u>, and 7.7, respectively). [2005]

The results indicate that <u>opiate addiction</u> in humans (tolerant state) is associated with <u>down-regulation</u> of brain opioid receptors and regulatory <u>GRK 2</u> \$\frac{1}{2}\$/6 and **beta-arrestin-2** \$\frac{1}{2}\$ proteins. [2004]

<u>G protein-coupled receptor</u> kinases, <u>beta-arrestin-2</u> and associated regulatory proteins in the human brain: <u>postmortem changes</u>, effect of age and subcellular distribution. [2002]

Although <u>beta-arrestin 1</u> and <u>beta-arrestin 2</u> are important for these effects induced by opioids with high in efficacy such as etorphine and <u>fentanyl</u>, morphine tolerance may be mediated mainly via <u>beta-arrestin 2</u> . [200]

4. The results suggest that VOL induces an increase in the expression of <u>lymphocyte beta2-adrenoceptor</u> \$\frac{1}{2}\$-sp GRK and beta-arrestin 2 \$\frac{1}{2}\$ in association with an attenuation in beta2-adrenoceptor \$\frac{1}{2}\$ levels. [2002]

Studies in mice have shown that <u>beta-arrestin-2</u> [?] plays an important role in the development of <u>morphine-interpretation</u>, and <u>respiratory depression</u>. [2007]

<u>Periaqueductal gray</u> (PAG) is a potential structure where morphine produces its antinociception, but it is unclear beta-arrestin 2 plays its regulatory effect on morphine at PAG. [2006]

The genes for phosphatidylinositol transfer protein (<u>PITPN</u>), retinal <u>guanylate</u> cyclase (<u>GUC2D</u>), <u>beta-arrestin 2</u> (ARRB2 $\stackrel{\leftarrow}{\omega}$), pigment epithelium-derived factor (<u>PEDF</u>) and <u>recoverin</u> (<u>RCV1</u> $\stackrel{\leftarrow}{\omega}$) map to this region and are cand genes for retinal disease. [1996]

In contrast, B1Rs, which are inducible and constitutively active, constitutively internalize without agonist via a clatl dependent pathway, do not recruit **beta-arrestin 2**, bind <u>G protein-coupled receptor</u> sorting protein, and target **Ivsosomes** for degradation. [2007]

Cotransfection of M3 cells with the <u>c-Myc</u>-tagged <u>hMC2R</u> and <u>beta-arrestin-2</u>-green <u>fluorescence</u> protein alo <u>sucrose</u> treatment revealed that <u>beta-arrestin-2</u>-green <u>fluorescence</u> protein and <u>c-Myc-hMC2R</u> were redistri similar intracellular vesicles through a clathrin-dependent, but caveolae-independent, process. [2006]

Possible association of beta-arrestin 2 gene with methamphetamine use disorder, but not schizophrenia. [2007]

Please cite the use of iHOP as "Hoffmann, R., Valencia, A. A gene network for navigating the literature. Nature Genetics 36, 664 (2004)" and a: http://www.ihop-net.org/".
